# Settings Tab

**H2 manual enable timer**

**LPT number selection**

**Long GC cycle timing parameters**

**Short GC cycle timing parameters**

**FID ignition pulses parameters**

The screenshot shows the EZGCC software interface with the Settings tab selected. The interface is divided into several sections: 'Port Number' with an 'LPT Port' dropdown; 'C1-C5 Cycle Timers (sec)' with 'Inject' (25) and 'Long Cycle' (120) settings; 'C1-C4 Cycle Timers (sec)' with 'Inject' (18) and 'Short Cycle' (90) settings; 'H2 Solenoid Timer (min)' with an 'Enable' spinner set to 3; 'Ignition Cycle Parameters' with 'Trials (cnt)' (1), 'Off (sec)' (1), 'On (sec)' (5), and 'H2 Purge (sec)' (15) settings; and a 'Gas Stream' section with buttons for 'Trap Gas', 'Cal Gas', and 'Inject Port'. An 'Info' section on the right displays system status: '10W Valve: BackFlush', 'H2 Solenoid: Off', 'Auto Cycle: C1-C5', 'FID Flame: Off', and 'Gas Stream: Trap Gas'. The status bar at the bottom indicates 'Status: Ready'. Annotations with arrows point to specific features: 'H2 manual enable timer' points to the 'H2 Solenoid Timer' section; 'LPT number selection' points to the 'LPT Port' dropdown; 'Long GC cycle timing parameters' points to the 'C1-C5 Cycle Timers' section; 'Short GC cycle timing parameters' points to the 'C1-C4 Cycle Timers' section; and 'FID ignition pulses parameters' points to the 'Ignition Cycle Parameters' section.
